

Safety...Economy...Convenience

SurgiCycle®

Who would you trust to sterilize your reusable surgical instruments? How about the world's leading medical sterilization company?

For more than two decades, Sterigenics has partnered with healthcare manufacturers across the globe to find new solutions in sterilization management.

Now, we're bringing that kind of partnership and innovation to the hospital setting with SurgiCycle™, our overnight sterilization service for reusable surgical instruments.

Only SurgiCycle brings you the efficacy of Ethylene Oxide (EO) sterilization, along with the convenience of overnight processing, plus prices that are highly favorable when compared to the cost of maintaining your own in-house system and equipment.

SurgiCycle...just one more way Sterigenics is bringing new efficiency and value to our customer family.

The Latest in Sterilization for Reusable Surgical Instruments

Leave it to the world's largest sterilization company to come up with a fresh new way to help you save staff time and enjoy the security and peace of mind that comes with knowing you've chosen the ultimate in processing for your reusable surgical instruments and labware.

A Better, Safer Process

- Highly effective Ethylene Oxide (EO) technology provides the sterility assurance levels (SAL) your protocols demand.
- Particularly effective for cameras, light cords, scopes and lumens—anything with an inner channel.
- Protects against the damage hydrogen peroxide and steam can cause.

Efficient and Cost Effective

- No cycle development costs. Sterigenics already offers a cycle appropriate for your needs and runs it in a facility near you.
- Convenient overnight processing. Drop off instruments by 5 p.m. and pick them up at 10 a.m., or earlier, the following morning.
- No worries about mix-ups and lost goods. Instruments and lab ware are processed and returned in the same container—with your seal unbroken.
- Documentation will be faxed or delivered along with your instruments and lab ware, whichever you prefer.

No EPA or OSHA Concerns

- With SurgiCycle, the compliance burden is on our shoulders, not yours.
- Instrument processing is handled by the industry leader and conforms to all regulatory requirements—EPA, OSHA, AAMI and JCAHO.
- Processing includes complete traceability and processing summary records.

Flexible Solution for Multiple Needs

- Effective and efficient back up to existing in-house processing.
- The perfect solution when overflow is a problem.
- Smooths out the instrument mix when instruments are coming from multiple sources—labs, research departments and off-site surgicenters.

Favorable Pricing and Service

- Surprisingly cost-effective compared to the cost of in-house processing.
- Choice of two container sizes: 24" x 20" x 12.5" and 39" x 14" x 13."
- Laboratory testing services are available upon request.
